

All,

We have created a new user interface at hummaps.com that includes drop down lists and a section quadrant grid. This will allow you to easily search for the maps in the location you are researching. We have also added the most recent update of maps that include the rest of the maps and corner records filed in 2018 (a total of 66 maps) as well as 31 unrecorded maps.

We have also created an online update interface with hummaps for us to use to update all the maps and will no longer be using the Hollins Index to do this task. We will be moving toward the goal of updating the corner records as soon as they are filed and maps soon as we receive them from the Recorder's Office. That being said, we have officially retired the Hollins Index and will no longer be sending out tiff images or updates.

I cannot say enough about the hard work and dedication it took to achieve this milestone. Thank you to Michael Hollins for creating the foundation database, Charlie Mack for showing us what was possible and taking us to the World Wide Web and Cailan Halliday for creating our new interface and bringing us to the next level. I would also like to thank, Jason Short and Michael Landry, for their diligence in maintaining our index and their assistance in the design of the new interface.

Thank you to the local survey community who have provided input and are using hummaps in the office and in the field on their mobile devices. Together we can accomplish great things!

Sincerely,
Ron Garton, PLS
Humboldt County Surveyor
